1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Macapagal (Reg. No. 55416) on January 10, 2005.

The application has been amended as follows:

On page 2, line 6, after "number", --09/933,353-- has been inserted;

Line 7, after "number", --09/933,280-- has been inserted.

On page 12, line 23 and page 17, line 20, "16" has been changed to --25--.

On page 18, line 23, "16" has been changed to --52--.

On page 20, line 10, "4" has been changed to --16--.

On page 21, line 20, "sysbol" and "synbol" have been changed to --symbol--.

On page 2 of the preliminary amendment filed 3/1/04, line 2, "1" has been changed to --1-24-- since claims 2-24 were cancelled in the transmittal letter filed on 3/1/04.

In claim 35, line 1, after "wherein", --the-- has been inserted.

In claim 37, line 3, "the trellis coder" has been changed to --a trellis coder--.

In claim 39, line 3, after "case", --and-- has been inserted.

The above changes are made in order to correct typographical errors and to provide proper antecedent basis in the claims.

2. The following is an examiner's statement of reasons for allowance: the prior art fails to show or fairly suggest an enhanced VSB receiver for receiving and decoding a terrestrial broadcasting signal transmitted from a VSB transmitter and a method thereof, having the combinations as claimed, including a demodulator for receiving an input signal including main data and enhanced data from the VSB transmitter and converting the input signal into a base band signal, a symbol indicator for indicating whether each symbol included in the input signal corresponds to the main data or the enhanced data, and generating a sequence of null bits identical to a sequence of null bits previously inserted into the enhanced data at predefined locations by the VSB transmitter, a slicer predictor for providing at least one of a slicer prediction signal and a prediction reliability signal by using the sequence of null bits generated from the symbol indicator, and a channel equalizer for correcting a distorted channel in the base band signal by using the slicer prediction signal, the prediction reliability signal, and the sequence of null bits, and outputting a channel equalizer output signal, as recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sherrie Hsia whose telephone number is (703) 305-4738.
